

PROJECT BRIEF REPORT

Project Name Analysis Entertainment in KSA

Project Manager Wateen Alfraidi

INTRODUCTION

This project is part of AI Programming course (AI221), focuses on cleaning, analyzing, and visualizing a real world dataset using Python. The selected dataset contains information about entertainment places in the Kingdom of Saudi Arabia.

OBJECTIVES

Analyzing entertainment data is useful for the country because it helps support the ongoing development of the entertainment sector, which is an important part of Saudi Vision 2030. The results of this analysis can help decision-makers understand public opinions, improve the quality of services, and enhance visitor experiences in different regions of Saudi Arabia.

DATASET INFORMATION

Name of Dataset: Entertainment in Saudi Arabia

Dataset type: CSV

Source: Kaggle

Number of rows: 564

Number of rows substituted: 500

Main columns: -Name -Rating -Review count -Genre -Location -Best comments

Link of Dataset in Kaggle: [Aesthetic Appeal: Create visually appealing interiors that reflect a modern minimalist style.](#)
